TECHNICAL SKILLS

AI Engineering: Azure AI Foundry (Models, Agents, Knowledge, Tools, Workflows, RBAC), Model Context Protocol (MCP), AI Agents (LangGraph, OpenAI Agents SDK, ADK), AI Workflows (LangChain, n8n), OpenAI Responses API, AWS Bedrock, AWS AgentCore, AWS Kiro, Claude Desktop, Copilot, Prompt Engineering

Platform Engineering & DevOps: Platform Engineering, Azure DevOps, GitHub Actions, GitLab CI/CD, Kubernetes (AKS, EKS), Docker, Infrastructure as Code (Terraform, ARM, Bicep, AWS CloudFormation), Git, Git Branching Strategies

DevSecOps: Gitleak, Snyk, GitHub Advanced Security, SonarCloud, Mend, Trivy, Checkov, Azure Policy, Secrets Management, Key Vault, owasp zap, Kyverno, OPA

Cloud Platforms:

- **Microsoft Azure:** Azure PaaS (App Service, Azure Functions, AKS, Azure Container Registry, Storage Accounts, Key Vault), Azure Networking (Virtual Network, Private Endpoints, Application Gateway, Load Balancer), Entra ID, Azure Monitor, Log Analytics, Application Insights, Virtual Machines, Azure Backup, Azure Site Recovery, Defender for Cloud, Microsoft Sentinel (Fundamentals)
- **Amazon Web Services (AWS):** EC2, EKS, ECS, Fargate, Lambda, ECR, S3, RDS, IAM, VPC, CloudWatch, Route 53, CloudFront, Secrets Manager

Programming & Automation: Automation Scripting using Python (FastAPI, Pydantic, Azure SDK, Boto3, OOP), Bash, REST APIs, Linux System Administration

Observability: Prometheus, Grafana, Azure Monitor, Application Insights, Log Analytics, opentelemetry

Professional Skills: Cloud Architecture, Technical Training, Technical Presentations, Blogging, Cross-functional Stakeholder Management.

Experience (5 Years)

Senior Associate – DevOps and AI, Coforge

Project: Islamic State Development Bank (IsDB) and Dnata (UAE)

April 2025 – Present

- **Reduced** typical deployment time from **1-3 days to 30 min** by developing an AI enabled Internal Developer Platform using Microsoft AI Foundry (GPT-5.3), Python, Azure CI-CD Pipelines and Terraform modules, Helm charts, GitOps using ArgoCD, monitoring using Azure Monitor, ELK Stack (Loki) and opentelemetry (Jaeger)
- **Standardized** CI/CD workflows using reusable Azure DevOps/Github templates & configs, reducing build times by **35%** and improving deployment consistency across Kubernetes (AKS), App Service, Functions, VM
- **Automated** infrastructure and application health validation across Azure and on-premises apps using Python FastAPI and Azure Automation (Powershell scripts), eliminating **7+ hours** of weekly operational effort and accelerating post-activity verification.
- **Mentored** 3 Juniors and delivered 10 KT Sessions within and cross Team on DevSecOps Tools (Sonarcloud, Trivy, Checkov, Owasp ZAP) Azure DevOps, GitOps, LLMs, RAG, Agentic AI and Prompt Engineering.

Highlights:

- **Enhanced** IAM BAU like Secret Rotation, Access Audit, User, Group creation using MS Graph API and python
- **Implemented** Enterprise Apps for SSO (OIDC, SAML), App Registrations, Keyless Identity Federation to external Tools, Assigning and Managing RBAC following Zero Trust, PoLP, JIT principles in Entra ID.
- **Implemented** AI-assisted pull request reviews using Azure AI Foundry models and Git Repo Branch Policies, REST API, Sonarqube MCP Servers that automatically generates code summaries, identifies security risks, and improving code review efficiency by **60%**.
- **Reduced** production **incident resolution time by 40%** by developing an AI-powered troubleshooting assistant using Azure AI Foundry Agents, MCP, AI Search, Python, Agent Custom Tools, providing automated root-cause analysis and incident resolution recommendations.
- **Modernized and Migrated** 18 Python-based ETL scripts from VM-hosted execution to serverless architecture. Using Claude, Github Copilot, Azure Functions, Key Vault, storage account, Azure SQL Database

DevOps SME, Koenig Solutions

Project: Intralot (Athens, Greece)

June 2022 – April 2025

- **Developed** 21 reusable Terraform modules and standardized Azure Pipelines templates with Azure Policy / AWS Config guardrails, enabling consistent infrastructure provisioning across environments.
- **Managed 11 production Kubernetes clusters** across AKS and EKS, performing platform upgrades, troubleshooting workloads, and improving platform reliability for business-critical applications.
- **Added** Shift-Left DevSecOps controls using GitHub Advanced Security, Snyk, SonarCloud, and Trivy, preventing vulnerable code from reaching production and strengthening software supply chain security.
- **Configured** end-to-end Kubernetes observability using Prometheus, Grafana, and AWS CloudWatch / Azure Monitor, reducing production **troubleshooting time by 30 min** and improving platform visibility.
- **Handled average 17 tickets/week** on Kubernetes platform operations including upgrades, RBAC, secrets management, KEDA, workload onboarding, and governance, platform security and operational reliability.

ACTIVE CERTIFICATIONS (4 MICROSOFT AZURE & 1 IN AWS)

MICROSOFT:

- Azure AI Apps and Agents Developer Associate
- Identity and Access Administrator Associate
- Azure Solutions Architect Expert
- Azure Security Engineer Associate

AWS:

AWS Certified SysOps Administrator – Associate

PROJECT

Troubleshooting Guider - [[Github Repo here](#)]

Business Problem solved: Issue resolution hints are buried in SOPs, RCAs, and documentations— Let AI finds the right solution in seconds.

KPI (Key Performance Indicator): Mean Time to Resolution (MTTR)

Description: Built a vector-based RAG solution using Azure AI Search (hybrid search and vector indexing), Azure AI Foundry, Azure Database for PostgreSQL, Azure Storage, Azure Monitor, and Application Insights. Grounded LLM responses using enterprise SOPs, implemented document hash-based change detection to ensure knowledge freshness, and integrated monitoring and observability to support reliable Day 2 operations.

EDUCATION

BACHELOR'S DEGREE (B.Sc)

From Christ Church College, Kanpur | Scored 85% (First Division) | Passing Year 2022
